
Cannot Load Dynamic Library Libmysqldll Sql Manager

1) Upload the 'emsproxy.php' script (which is included in the installation package of SQL Manager) to your site root directory using the available FTP-account. In your browser specify the URL path to the downloaded 'emsproxy.php' script (e.g.: The 'emsproxy.php script is installed correctly' message should be displayed. It means that the script works correctly. 2) After you've uploaded the 'emsproxy.php' script to the root folder and opened the URL in your browser, you should get the following message: "The requested script could not be found.", which means that the script is properly installed. 3) Login as a non-super-admin user. You should be able to see the Messages tab and click on the 'messages' button. This should trigger a database connection error. The error should contain the following message: "cannot initialize MySQL extension." 4) Install the MySQL client library. This can be done either by following the instructions in: <http://dev.mysql.com/downloads/mysql/upgrading.html> or by manually downloading and installing MySQL client library tar file. The tar file can be downloaded here: <http://dev.mysql.com/downloads/mysql/> 5) Open the php.ini file using any text editor. For Win32 it's C:\Windows\php.ini and for Linux it is /etc/php.ini (these paths may vary depending on the operating system you are using). In the php.ini file search for the lines 'extension=' and change this line to the following one: What to do when I receive an error message saying: "Cannot load mysql.dll" when I trying to start the Server from the PHP manager (File->Server List)? I installed MYSQL Connector Version 6.1.7 in php manager but it still doesn't work. It's showing the message: "Cannot load mysql.dll". I'm using WAMP on the test machine.

Cannot Load Dynamic Library Libmysqldll Sql Manager

extension=php_mysql.dll cannot load dynamic library libmysqldll sql manager it could be a number of reasons why the script isn't loading. make sure that the wampserver.exe file is in the wamp/bin/ directory, that the wampserver.exe file has the proper permissions for the user account you are running the script as, and that you have copied over the php_mysql.dll file and mysql.so file in the right places. also, check your php.ini file to make sure that the php_mysql.dll file is listed. if not, then copy/paste the following into your php.ini file: mysql is a client library that allows you to use php's mysql extensions, including the mysql extension, without needing the mysql server itself. as a result, you can use mysql to create php scripts that connect to mysql from your web server. in short, the mysql extension is a thin wrapper around the mysql c api. to use it, you need to ensure that the libmysql.dll file is available in your php's configuration directory and that the php mysql extension is enabled. in other words, you need to be able to load the libmysql.dll file and that the php mysql extension is enabled in your php configuration file. please be aware that a dll is a dynamic link library and it can only be loaded if it is linked to a program. most likely, your php installation is not linked to the mysql client library. if you have installed the mysql client library files to your system, you need to link them to your php installation. i have included the instructions for doing this below. to link the mysql client library, you must first determine the path to the mysql client library. go to the start menu, and select run. in the open box, enter c:\program files\mysql\mysql connector c++\libmysql. 5ec8ef588b
