In recent years, a light-emitting device using electroluminescence (EL) phenomenon of a light-emitting material in an organic EL device or a light-emitting diode (LED) has been actively researched and developed as a display device with a flat

panel structure which is different from a CRT and a liquid crystal display. A display based on the EL light-emitting device has a low emission efficiency, but a large high brightness display can be achieved. Therefore, a display based on the EL light-emitting device is expected to be applied as a display device of a portable electronic apparatus, such as a mobile phone. A display based on the EL light-emitting device is roughly classified into a passive type and an active type. In the passive type, since the emission luminance of EL light-emitting elements is proportional to the supplied current, one pixel is controlled by a switching transistor, and the lighting state is controlled by a time-division drive. In the active type, one pixel is controlled by a switching element, and the lighting state of the light-emitting element is controlled by a charge-injection drive or a current-drive drive in which the lighting state of a light-emitting element is changed in a constant current. As a switching transistor in the active type, a TFT formed of an oxide semiconductor has a faster carrier-injection speed than a TFT using amorphous silicon, and has been actively developed. On the other hand, in a display based on an EL light-emitting device, it is requested to increase the area of a display screen, to realize a bright screen. For example, in Japanese Patent Application Laid-Open No. 2013-113581, a method of providing an OLED element and a switching transistor in an integrated structure is disclosed as a method of realizing an increase in area of a display screen. However, even if the switching element and the light-emitting element are formed in the integrated structure, it is difficult to realize a bright display with high definition as in an organic EL panel using an active matrix structure. On the other hand, as a method of providing a TFT switching element and an organic EL panel with an increased area, a light-emitting device including a TFT, a light-emitting element, and a transparent substrate between the TFT and the light-emitting element has been disclosed (see Japanese Patent Application Laid-Open No. 2014-52345, and Japanese Patent Application Laid-Open No. 2014-53688).

Story highlights
Wikileaks founder Julian Assange told Swedish prosecutor he wasn't accused of rape
He added that he didn't have sex with the woman
Legal team says attorney's notes could damage the case, the prosecutor says
Assange's allegations have not been proven, Swedish lawyer says
A sensational release by Wikileaks Wednesday casts fresh light on one of the most controversial

aspects of the computer guru Julian Assange's legal saga: the allegations of sex crimes and abuse of power leveled against him by two women in Sweden. The publication of the new documents could be politically explosive for the former technology consultant who has been holed up in the Ecuadorean Embassy in London for the past seven months. 5ec8ef588b
